

# Problem A

## GCD

**Input:** Standard Input  
**Output:** Standard Output

Given the value of N, you will have to find the value of G. The definition of G is given below:

$$G = \sum_{i=1}^{i < N} \sum_{j=i+1}^{j \leq N} GCD(i, j)$$

Here GCD(i,j) means the greatest common divisor of integer i and integer j.

For those who have trouble understanding summation notation, the meaning of G is given in the following code:

```
G=0;
for(i=1;i<N;i++)
for(j=i+1;j<=N;j++)
{
    G+=GCD(i,j);
}
/*Here GCD() is a function that finds
the greatest common divisor of the two
input numbers*/
```

### Input

The input file contains at most 100 lines of inputs. Each line contains an integer N ( $1 < N < 501$ ). The meaning of N is given in the problem statement. Input is terminated by a line containing a single zero. This zero should not be processed.

### Output

For each line of input produce one line of output. This line contains the value of G for corresponding N.

### Sample Input

```
10
100
500
0
```

### Output for Sample Input

```
67
13015
442011
```
