# Problem K <br> Palindrome Again 

Input: Standard Input
Output: Standard Output
You are given a string $\mathbf{S}$ of length $\mathbf{N}$. Can you find a string $\mathbf{P}$ which satisfies the following conditions?

1. Length of $\mathbf{P}$ will be $\mathbf{N}$
2. Distance between $\mathbf{S}$ and $\mathbf{P}$ will be less than or equal to $\mathbf{K}$
3. $\mathbf{P}$ will be a palindrome.
4. $\mathbf{P}$ can contain only characters 'a', 'b', ..., 'z'

You have to calculate, in how many ways you can choose $\mathbf{P}$. This number can be very large, so print the answer modulo $1000000000\left(10^{9}\right)$.

## Notes:

- A string is a sequence of characters. For this problem consider that all strings can contain only 'a', ‘b', ..., 'z', i.e. 26 available characters.
- The length of the string is defined by the number of characters in the string. For example, length of "abcba" is 5 .
- A string is called palindrome when it is the same string when written from forwards or backwards. For example - "abcba", "abba", "a" are palindrome but "abc" is not a palindrome.
- Distance between two string of same length is the number of mismatches of corresponding characters. For example, distance between "abcb" and "bcba" is 4 because no character of first string matches to the character of the corresponding index of second string, but distance between "abc" and "cba" is 2 .

## Input

Input starts with an integer $\boldsymbol{T}$ ( T is around 5000), the number of test cases.
Each test case consists of two lines. First line contains two integers $\mathbf{N}(1 \leq \mathbf{N} \leq 1000)$ and $\mathbf{K}$ ( $0 \leq \mathrm{K} \leq 1000$ ). Second line contains a string $\mathbf{S}$ of length $\mathbf{N}$. $\mathbf{S}$ contains only characters from 'a', 'b', ..., 'z'.

## Output

For each test case output the number of test cases followed by the number of ways the string can be chosen modulo $1000000000\left(10^{9}\right)$. See sample output for exact format.

| Sample Input | Output for Sample Input |
| :--- | :--- |
| 3 | Case 1: 51 |
| 32 | Case 2: 2 |
| kxk | Case 3: 76 |
| 41 |  |
| addc |  |
| 43 |  |
| Addc |  |
