## Problem J

### Longest Word

Time Limit: 2 seconds

A word is composed of only letters of the alphabet (a-z, A-Z) and may contain one hyphen (-) or more. Given a text containing words, and other characters (punctuations, numbers, symbols, etc), you are to write a program to find the longest word.

Each letter or a hyphen in a word is counted as 1. For example,

The length of Apple	is	5
The length of son-in-law	is	10
The length of ACM-ICPC	is	8

#### Input

A text may contain several lines and paragraphs but the text does not exceed 10,000 characters. No word can exceed 100 characters. The word E-N-D indicates the end of input.

#### Output

Print out the longest word in small letters. If there exist several longest words, print only the first one found in the text.

#### Sample Input

```
ACM International Collegiate Programming Contest (abbreviated as
ACM-ICPC or just ICPC) is an annual multi-tiered computer programming
competition among the universities of the world. The contest is
sponsored by IBM. Headquartered at Baylor University, with autonomous
regions on six continents, the ICPC is directed by Baylor Professor
William B. Poucher, Executive Director, and operates under the
auspices of the Association for Computing Machinery (ACM).
