## IIUPC 2013

## Problem A: See Emily Play

You are taking care of Emily this afternoon. To keep her entertained, you've designed a game for her involving some math. The rule for the game is such --
Emily is initially given a big number $\mathbf{N}$. In each step she is supposed to:

1. If $\mathbf{N}$ is $\mathbf{0}$, stop and call it a day
2. If $\mathbf{N}$ is divisible by $\mathbf{2}$, divide $\mathbf{N}$ by $\mathbf{2}$.
3. Otherwise, subtract $\mathbf{1}$ from $\mathbf{N}$.

For example, starting with 14 , she gets $7,6,3,2,1,0$
Now, you see, Emily is just a kid and hasn't grown strong notions of rules yet. So, as you have given the rules to her, Emily tries, but misunderstands. In her mind, she rewrites the rules :

1. If $\mathbf{N}$ is $\mathbf{0}$, stop and call it a day
2. If $\mathbf{N}$ is divisible by $\mathbf{2}$, divide $\mathbf{N}$ by 2 .
3. Randomly and unbiasedly choose to do any of these two :

- subtract $\mathbf{1}$ from $\mathbf{N}$
- add $\mathbf{1}$ with $\mathbf{N}$

For each division Emily takes $\mathbf{d}$ seconds, For each subtraction she takes $\mathbf{s}$ seconds, for each addition she takes a seconds. Now that you know how she is bending the rules, you start to wonder how many seconds you have to see Emily play.

## Input

First line of input will contain the number of test cases, $\mathbf{T} \leq \mathbf{1 0 0 0 0 0}$. Then $\mathbf{T}$ test cases follow. For each case there will be a single line containing four integers separated by space :

Ndsa
where,
$1 \leq \mathrm{N} \leq 1000000$
$\mathbf{1} \leq \mathrm{d}, \mathrm{s}, \mathrm{a} \leq 10$

## Output

For each case output a single line containing one real number, the expected number of seconds : T. Show exactly $\mathbf{3}$ digits after decimal point, properly rounded.

| Sample Input | Output for Sample Input |  |  |
| :--- | :--- | :--- | :--- |
| 6 |  |  |  |
| 1 | 1 | 1 |  |
| 1 | 1 | 1 |  |
| 1 | 1 | 1.000 |  |
| 3 | 1 | 1 |  |
| 4 | 1 | 1 |  |
| 1 | 1 | 1 |  |
| 100000 | 1 | 1 | 5.000 |
| 1 |  | 6.750 |  |
