

A

XOR Sequence Revisited

Input: Standard Input
Output: Standard Output

Jerry loves XOR sequence. He has an array A . The array is described below:

- $A_0=1$
- $A_x=A_{x-1}\oplus x$ for $x>0$ (\oplus is symbol of XOR)

First few elements of the array are [1, 0, 2, 1, 5, 0, 6, 1, 9].

Given a range $[L, R]$, find the **AND** of all the elements between A_L and A_R (inclusive), i.e. You need to find $A_L \& A_{L+1} \& A_{L+2} \& \dots \& A_R$ where $\&$ is the symbol of bitwise AND operator.

Input

First line will contain an integer number T ($1 \leq T \leq 100000$), denoting number of test cases. Each of the next T lines contains one test case. Each test case will contain two integers L and R ($0 \leq L \leq R \leq 10^{15}$).

Warning: Dataset of this problem is large; please use faster input/output methods.

Output

For each case, print the answer in a single line.

Sample Input

```
2
2 4
2 2
```

Output for Sample Input

```
0
2
```
