

## 11714 Blind Sorting

I am a polar bear. But I am not just an ordinary polar bear. Yes I am extra ordinary! I love to play with numbers. One day my very good friend Mr. Panda came to me, and challenged me to solve a puzzle. He blindfolded me, and said that I have  $n$  distinct numbers. What I can ask is whether  $a$ -th number is larger than  $b$ -th number and he will answer me properly. What I have to do is to find out the largest and second largest number. I thought for a while and said “Come on, I will do it in minimum number of comparison.”

### Input

There will be a non-negative integer,  $n$  in each of the line of input where  $n$  is as described above.  $n$  will be less than any 10 digit prime number and not less than the smallest prime.

### Output

For each  $n$ , output number of questions that I have to ask Mr. Panda in the worst case.

### Sample Input

```
2
4
```

### Sample Output

```
1
4
```
