

12930 Bigger or Smaller

Given two floating-point numbers, determine whether the first one is bigger, smaller or the same as the second one. Each floating point number is formatted as

$$[integer\ part].[fraction\ part]$$

For simplicity, both of the integer part and fraction part of the given floating point numbers will be non-empty, and the integer part will not have leading zeros. However, fraction part can have trailing zeros, so 0.0 is the same as 0.000.

Input

There will be at most 20 test cases. Each test case contains a single line with two floating-point numbers formatted as above. Each number is a string with no more than 100 characters.

Output

For each test case, print the case number, and one of 'Bigger', 'Smaller' and 'Same'.

Sample Input

```
1.0 2.0
0.00001 0.00000
0.0 0.000
```

Sample Output

```
Case 1: Smaller
Case 2: Bigger
Case 3: Same
```
